

# N GEORGE MASON DR & N PARK DR

## BEFORE TREATMENT

**Safety Need:** Identified through annual crash analysis, specifically angle crashes resulting from drivers on N Park Dr turning left or going through the stop-controlled approaches to the intersection.

**Project Description:** This project will temporarily close the left turn and through movements from N Park Dr at N George Mason Dr using signage, flexible posts/bollards, and wheel stops. Left turns will continue to be permitted from N George Mason Dr to access northbound or southbound N Park Dr. This project was coordinated across Arlington’s Division of Transportation, Fire Department, Public Schools, and Department of Parks and Recreation given the intersection is in a school zone next to a community center.
