

Quick-Build Project Prioritization

Step 1

Rank w/ Prioritization Criteria

On High-Injury Network?

Identified Hot Spot?

Recent Crash History?

In Equity Emphasis Area?

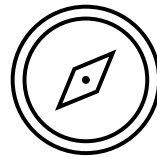

In School Zone?

Tactical In Place?

Speeding Issue?

Complexity of Implementation?

Step 2

Confirm project specifications and identify which projects are feasible within a quick-build timeframe (<1 to 2 years) and budget (typically under \$250,000).

Step 3

Confirm quick-build project plan/budget/schedule and post info on website.

Projects that did not make it through step 2 will remain in the queue for the next project ranking (occurs quarterly).

Projects deemed too complex for the Quick-Build program will be recommended to the capital project program. The capital project program is tied to the bi-annual budget cycle.
