

Tuckahoe Park Crossing at N Sycamore Street

BEFORE TREATMENT

Safety Issue: This project was identified through community-reported concerns about limited safe crossing opportunities across N Sycamore St. The location was selected for a project due to its proximity to an elementary school and park space.

Project Description: The project added a new crosswalk with ADA-compliant receiving curb ramps to create a mid-block crossing over N Sycamore St between the long block from Langston Blvd and 26th St N. The new crosswalk will provide access to Tuckahoe Park and Tuckahoe Elementary School, both areas of high pedestrian activity.

Completed: December 2021
