

Williamsburg Blvd & N George Mason Dr

BEFORE TREATMENT

Safety Issue: Identified in the 2018 Hot Spot Crash Analysis as an intersection with a significant number of angle crashes.

Project Description: This project constructed curb extensions in the northeast and northwest quadrants of the intersection, realigned curbs to reduce crossing distances for pedestrians, added a new crossing on the north side, and extended the medians on each side to create pedestrian refuge areas. These changes will improve accessibility to transit, reduce crossing distances for people walking, decrease vehicle turning speeds, and increase user visibility for people walking, biking and driving.

Completed: Summer 2022
