Mid-Block Cut-Through Key Points for Permitting Building to Bridge-over a Portion of the Cut-Through

- Bridging the building over portions of the mid-block connection will have no negative impacts on the ability to provide passage for vehicles and pedestrians.
- Covering a portion of the mid-block connection will provide protection from the elements and provide opportunities for a safe and pleasant space.
- The architectural character of the bridging over the mid-block connection will create a portal that more clearly announces this space to the public.
- With sufficient clear height, visibility from either side of the block will be maintained.
- Linking building areas on either side above grade of the mid-block connection provides needed flexibility and allows for the full development anticipated by the Sector Plan.
